

Table of Contents

01. GPU Accelerated Textons and Dense SIFT Features for Human Settlement Detection from High-Resolution Satellite Imagery Dilip Patlolla, Sophie Voisin, Harini Sridharan, and Anil Cheriyyadat	Page 1-7
02. A Web Based Geographic Information Platform to Support Urban Adaptation to Climate Change Phil Nugent, Olufemi Omitaomu, Esther Parish, Rui Mei, Kathleen Ernst, and Mariya Absar	Page 8-11
03. Our Town: How Socioeconomics Shape Functional Neighborhoods in American Cities Alex Singleton, Seth Spielman, and David O'Sullivan	Page 12-13
04. Spatial Aggregation as a Means to Improve Data Quality Min Sun and David Wong	Page 14-17
05. Uncertainties on Spatial Data Analysis by Various Sources of error Monghyeon Lee, Yongwan Chun, and Daniel A. Griffith	Page 18-24
06. Improving Accuracy of Categorical Attribute Modeling with Indicator Simulation and Soft Information Carlos A. Felgueiras, Antonio M. V. Monteiro, Jussara O. Ortiz, and Eduardo C. G. Camargo	Page 25-31
07. Estimating Variance Function of a Nonstationary Process Using a Difference Filter Eunice Kim and Zhengyuan Zhu	Page 32-41
08. A Framework to Assess Model Structure Stationarity Judith Verstegen, Floor van der Hilst, and Derek Karssenber	Page 42-45

09. A Variance-Stabilizing Transformation to Mitigate Biased Variogram Estimation in Heterogeneous Surfaces with Clustered Samples
Xiaojun Pu and Michael Tiefelsdorf
Page 46-53
10. When Space Beats Time: decomposing and interpreting temporal and spatial components after hurricane events
Marco Millones, Benoit Parmentier, Daniel A. Griffith, Stuart E Hamilton, and Sean McFall
Page 54-60
11. Power Analysis for Geographic Representativeness
Matthew Schmill and Tim Oates
Page 61-64
12. Respondent Driven Sampling and Spatial Autocorrelation
E Morris, Vaishnavi Thacker, and Daniel A. Griffith
Page 65-72
13. The Statistical Distribution of Coefficients for Constructing Eigenvector Spatial Filters
Parmanand Sinha, Monghyeon Lee, Yongwan Chun, and Daniel A. Griffith
Page 73-78
14. The Moran Coefficient and the Geary Ratio: Some mathematical and numerical comparisons
Qing Luo, Daniel A. Griffith, and Huayi Wu
Page 79-88
15. Mapping Spatio-Temporal Patterns of Disabled People in emergencies: A Bayesian approach
Thanos Bantis, James Haworth, Catherine Holloway, and John Twigg
Page 89-97
16. Predicting Hourly Ozone Pollution in Dallas-Fort Worth Area Using Spatio-Temporal Clustering
Mahdi Ahmadi, Yan Huang, and Kuruvilla John
Page 98-109

17. Development, Evaluation and Parallelization of a Spatio-Temporal, Topographic, and Spectral GIS-based Solar Radiation Model
Iliyana Dobрева, Michael Bishop, Jyh-Charn Liu, and Liang Da
Page 110-114
18. Using Co-clustering to Analyze Spatio-Temporal Patterns: A Case Study Based on Spring Phenology
Raul Zurita-Milla, Xiaojing Wu, and Menno-Jan Kraak
Page 115-119
19. Regionalization of the Conterminous U.S. into Hierarchical Landscape Pattern Types
Jacek Niesterowicz, Tomasz Stepinski, and Jaroslaw Jasiewicz
Page 120-124
20. Integrating Fire-spread and Household-level Trigger Modeling to Stage Wildfire Evacuation Warnings
Dapeng Li, Thomas Cova, and Philip Dennison
Page 125-131
21. Parallel Calculation of LS Factor for Regional Scale Soil Erosion Assessment
Kai Liu and Guoan Tang
Page 132-136
22. Comparing Curve Matching Approaches for Land Cover Classification Using Waveform Data
Yuhong Zhou and Fang Qiu
Page 137-140
23. Developing a Geocomputational Workflow to Check the Consistency of Volunteered Geographic Information
Hamed Mehdi Poor, Raul Zurita Milla, and Menno-Jan Kraak
Page 141-147
24. Exploring Spatial Decay Effect in Mass Media and Social Media: A Case Study of China
Yihong Yuan
Page 148-152
25. Can Social Media Play a Role in Developing Building Occupancy Curves for Small Area Estimation?

Robert Stewart, Jesse Piburn, Eric Weber, Marie Urban, April Morton, Gautam Thakur, and Budhendra Bhaduri

Page 153-158

26. Application of Social Media Data to High Resolution Mapping of a Special Event Population

Kelly Sims, Eric Weber, Budhendra Bhaduri, Gautam S. Thakur, and David Resseguie

Page 159-164

27. Design and Validation of Dynamic Hierarchies and Adaptive Layouts Using Spatial Graph Grammars

Kai Liao, Jun Kong, Kang Zhang, and Bauke de Vries

Page 165-171

28. Using a Null Model Approach to Explore How Dynamic Interactions in Wildlife Are Analyzed

Jennifer Miller

Page 172-176

29. Do American Communities Provide Signals to the Spatial Pattern Distribution of Trees and Palms in Guyana?

Aravind Sivasailam and Anthony Cummings

Page 177-186

30. Simulating the Effects of Migration on the Uncertainty of Species' Range Shift.

Paul Holloway, Jennifer Miller, and Simon Gillings

Page 187-194

31. A Utility Study of Ant Colony Optimization for Automated Calibration of Land Use Cellular Automata Models

Charles P. Newland, Hedwig Van Delden, Jeffrey P. Newman, Holger R. Maier, Roel Vanhout, and Aaron C. Zecchin

Page 195-198

32. Modelling Land Use Dynamics in Luxembourg Cross Border Region: The Use of Cellular Automata and Decision Tree Learning Model.

Omar Charif and Reine Maria Basse

Page 199-203

33. Designing Policies to Prevent Sex Trafficking: A Cellular Automata Approach
Katarina Mayer
Page 204-207

34. Integrating the Multi-Label Land Use Concept and Cellular Automata with the ANN-based Land Transformation Model
Hichem Omrani, Amin Tayyebi, and Bryan C Pijanowski
Page 208-210

35. Exploring 3D Trajectory Visualization in a Virtual Environment
Jie Li, Zhao Xiao, and Jun Kong
Page 211-216

36. High Resolution Population Grid for the Entire United States
Anna Dmowska and Tomasz Stepinski
Page 217-222

37. Can Grid and TIN coexist?
Weidong Zhao, Jitang Zhao, Lei Ma, Wan Zhou, Jian Tian, and Jiazhong Qian
Page 223-229

38. Geovisualization of Attribute Uncertainty
Hyeongmo Koo, Yongwan Chun, and Daniel A. Griffith
Page 230-236

39. World Climate Search and Classification Using Dynamic Time Warping Similarity Function
Pawel Netzel and Tomasz Stepinski
Page 237-241

40. Attribute Portfolio Distance: A Dynamic Time Warping based Approach to Comparing and Detecting Common Spatiotemporal Patterns among Multi-Attribute Data Portfolios
Jesse Piburn, Robert Stewart, and April Morton
Page 242-248

41. Deriving Spatially Refined Consistent Small Area Estimates over Time Using Cadastral Data
Hamidreza Zoraghein, Stefan Leyk, Matthew Ruther, and Barbara P. Battenfield
Page 249-255

42. Understanding Individual Daily Activity Space Based on Large Scale Mobile Phone Location Data
Yang Xu, Shih-Lung Shaw, Ling Yin, and Ziliang Zhao
Page 256-261

43. From Everywhere To Everywhere (FETE): Adaptation of a Pedestrian Movement Network Model to a Hybrid Parallel Environment
Alexandre Sorokine, Devin White, and Andrew Hardin
Page 262-267

44. Uncovering Digital Divide and Physical Divide Using Mobile Phone Data
Song Gao, Bo Yan, Li Gong, Blake Regalia, Yiting Ju, and Yingjie Hu
Page 268-274

45. SVM Classification of London Police Foot Patrol Behaviour
Jianan Shen and Tao Cheng
Page 275-280

46. Geocomputation Methods for Dyadic Relationships
Clio Andris, Nathan Frey, Jeremy Van Cleve, and James O'Dwyer
Page 281-285

47. A Hybrid Dasymetric and Machine Learning Approach to High-Resolution Residential Electricity Consumption Modeling
April Morton, Nicholas Nagle, Jesse Piburn, Robert Stewart, and Ryan Mcmanamay
Page 286-291

48. Performance Analysis of Machine Learning Algorithms for Regression of Spatial Variables: A Case Study in the Real Estate Industry.
Sebastian Santibanez, Marius Kloft, and Tobia Lakes
Page 292-297

49. A Soft Computing Logic Method for Agricultural Land Suitability Evaluation
Bryn Montgomery, Suzana Dragicevic, and Jozo Dujmovic
Page 298-304

50. Geospatial Data Mining in Volunteer Data: How Natural Conditions Might Increase the Risk of Tick Bites and Lyme Disease?
Irene Garcia-Martí, Raúl Zurita-Milla, Sita Bennema, Margriet G. Harms, C. C. van den Wijngaard, Arno Swart, and Arnold J. H. van Vliet

- Page 305-309
51. Surgical Phase Recognition using Movement Data from Video Imagery and Location Sensor Data
Atsushi Nara, Chris Allen, and Kiyoshi Izumi
Page 310-316
52. Urban Water-log Simulation and Prediction based on Multi-Agent Systems
Shitai Bao, Changjoo Kim, Wenping Ai, Zehui Lai and Jianfang Wang
Page 317-325
53. Simulation of Spatial Disorientation in Human Walking Behavior: Optimizing Wandering Disutility Functions
Amir Najian and Denis Dean
Page 326-329
54. Enabling the Acceleration of Dust Simulation using Job Scheduling Method in a Cloud Environment
Manzhu Yu, Chaowei Yang, and Zhenlong Li
Page 330-336
55. Simulating Flood Impacts in Kampala, Uganda: Why Land Patterns Matter
Eduardo Pérez-Molina, Richard Sliuzas, Victor Jetten, and Martin van Maarseveen
Page 337-342
56. MIRAGE: A Framework for Data-driven Collaborative High-resolution Simulation
Byung Park, Melissa Allen, Devin White, Eric Weber, John Murphy, Michael North, and Pam Sydelko
Page 343-348
57. A Vector Agent-Based Unsupervised Image Classification for High Spatial Resolution Satellite Imagery
Kambiz Borna, Antoni Moore, and Pascal Sirguy
Page 349-354
58. Accelerating Agent-Based Emergency Evacuation Planning using a Knowledge Database based on Population Distribution Regularity
Ling Yin, Jinxing Hu, and Qi Yu
Page 355-361

59. A Locality-aware Approach to Scalable Parallel Agent-based Models of Spatially Heterogeneous Interactions
Zhaoya Gong, Wenwu Tang, and Jean-Claude Thill
Page 362-365
60. Developing a Bivariate AMOEBA Technique
Sang-Il Lee and Daeheon Cho
Page 366-369
61. Computationally Efficient Algorithms for Settlement Mapping Using Very High-resolution Images
Ranga Raju Vatsavai
Page 370-377
62. Investigation of Landslide based on High Performance and Cloud-enabled Geocomputation
Jun Liu, Shuguang Liu, Qiming Zhou, and Jing Qian
Page 378-384
63. A Fully-Automated High Performance Image Registration Workflow to Support Precision Geolocation for Imagery Collected by Airborne and Spaceborne Sensors
Devin White and Christopher Davis
Page 385-388
64. Deviation Flow Refueling Location Model for Continuous Space: Commercial Drone Delivery System for Urban Area
Insu Hong, Michael Kuby, and Alan Murray
Page 389-394
65. Mining Sequential Pattern of Multi-dimensional Wind Profiles
Norhakim Yusof, Raul Zurita-Milla, and Menno-Jan Kraak
Page 395-400
66. Space-time Cluster Detection Using Network-Constrained Minimum Spanning Trees on GPU
Kevin Stofan
Page 401-404
67. Track Spatiotemporal Spread of Public Concerns on Ebola in the U.S. via Twitter
Ying Liu, Feixiong Luo, and Guofeng Cao

Page 405-412

68. Spatiotemporal Epidemic Modeling with libSpatialSEIR: Specification, Fitting, Selection, and Prediction
Grant Brown and Jacob Oleson

Page 413-419

69. Parallelizing Affinity Propagation using GPUs for Spatial Cluster Analysis over Big Geospatial Data
Xuan Shi

Page 420-428

70. Optimizing urban modeling based on Road Network and Land Use/Cover Changes by Using Agent Base – Cellular Automata Model
Yousef Khajavigodellou, Ali Asghar Alesheikh, Farshad Hakimpour, and Kamran Chapi

Page 429-433

71. A Distributed Simulation Method of Forest Fire Propagation Based on Cellular Automata Model
Zhenqiang Li, Xuefeng Guan, and Huayi Wu

Page 434-439

72. A MPI-based Parallel Pyramid Building Algorithm for Large-scale RS Image
Gaojin He, Luo Chen, Wei Xiong, Qiuyun Wu, and Ning Jing

Page 440-446

73. GeoSquare: A Cloud-enabled Geospatial Information Resources (GIRs) Infrastructure for Collaboration and Sharing
Kai Hu, Huayi Wu, Zhipeng Gui, Lan You, Ping Shen, Shuang Gao, Xiaoqiang Cheng, and Jie Zheng

Page 447-452

74. Identifying Significant Drivers for the Tradeoff and Synergy between Carbon Sequestration and Water Yield Ecosystem Services at the Watershed/Eco-region Level in the Southeastern United States.
Mukhtar Ahmed Ajaz Ahmed, Amr Abd-Elrahman, Francisco Escobedo, Wendell Cropper, and Nilesh Timilsina

Page 453-456

75. A Tool for Uncertainty Analysis of Fuzzy-Probabilistic Models in GIS:
Conceptualization & Implementation
J. Fernando Rios
Page 457-463

76. Terra Populus: Geocomputation for Population and Environment Data
David Haynes II, Tracy Kugler, David Van Riper, and Steven Manson
Page 464-465

77. Geocomputation for Urban Planning in the Era of Big Data: Developing Automated
Tools for Analyzing LiDAR data to Inform Urban Planning and Policy in Portland,
OR
Jackson Voelkel, Vivek Shandas, Meenakshi Rao, and Anthony Thompson
Page 466-471

78. Geostatistical Models for the Spatial Distribution of Uranium in the Continental
United States
Sara Stoudt
Page 472-477

79. Incorporation of Planetary Boundary Layer Height Modeling with GIS Techniques to
Determine Criteria for Aerosolization and Transport of Infectious Agents in
Southwestern United States
John Olgin and Deana Pennington
Page 478-481

80. Spatio-Temporal Evolution of Aerosols in the Atlantic Ocean
Mariana Güereque, Deana Pennington, and Vernon Morris
Page 482-484

81. Modeling Land Use Change Using an Eigenvector Spatial Filtering Model
Specification for Discrete Response
Parmanand Sinha
Page 485-491

82. Using Self-Organizing Maps to Analyse Spatial Temporal Diffusion of Infectious
Diseases
Ellen-Wien Augustijn-Beckers, Raul Zurita-Milla, and Nicoline van der Maas
Page 492-494

83. Comparing Old and New Urban Hierarchies using Agent-Based Simulation
Xiaomeng Li and Zachary P Neal
Page 495-498
84. Bangladesh East-West Immunization Divide: Time to Target Communities Instead of Households?
Priyanka Vyas and Dohyeong Kim
Page 499-507
85. Geostatistical Modeling of Primary and Secondary Automobile Traffic as Ecological Disturbance Proxy Across the Contiguous United States
Sean Mcfall, Matthias Leu, Benoit Parmentier, Marco Millones, and Stuart Hamilton
Page 508-516
86. Animating Maps: Visual Analytics Meets Geoweb 2.0
Piyush Yadav, Shailesh Deshpande, and Raja Sengupta
Page 517-523
87. A Spatiotemporal Data Mining Framework for Mining Ozone Pollution Data
Su Jing Wang, Christoph F. Eick, and Qiang Xu
Page 524-527
88. Atvis: A New Transit Visualization System
Jiaxuan Pang, Charles Tian, Yan Huang, Bill Buckles, and Arash Mirzaei
Page 528-536
